

Charles County, MD

Community Survey

August - October 2023

Powered by  Zencity

The Zencity Community Survey

A recurring survey that never stops running, the Zencity Community Survey measures how satisfied residents are with their community and with local government-provided services and allows officials to compare these scores over time and against a cohort of similar communities.

Survey Methodology

754 respondents were digitally recruited (e.g. over social media, mobile apps, local websites, and survey panels) between August - October 2023. An additional 502 responses were collected through the county's distribution efforts, including distribution via a link on Nextdoor, which were used to supplement the Zencity-recruited responses for free-text questions. Zencity built a representative sample by matching respondent data to the U.S. Census Bureau's race, ethnicity, age, and gender distributions in Charles County, MD. Finally, rake-weighting was applied as a statistical safeguard to balance out any remaining discrepancies in distribution, so no demographic group is overrepresented or underrepresented in the final score.

Score Calculation

The overall satisfaction score is calculated by averaging how each resident rated quality of life and community characteristics on a numeric scale (1-5), and classifying this average as satisfied, neutral, or not satisfied. The resulting score, then, is the weighted percentage of residents who gave an overall satisfied rating.

Overall Satisfaction

The overall satisfaction score is calculated from the questions in the two main sections of the survey: general quality of life and satisfaction with different characteristics of life in your community.

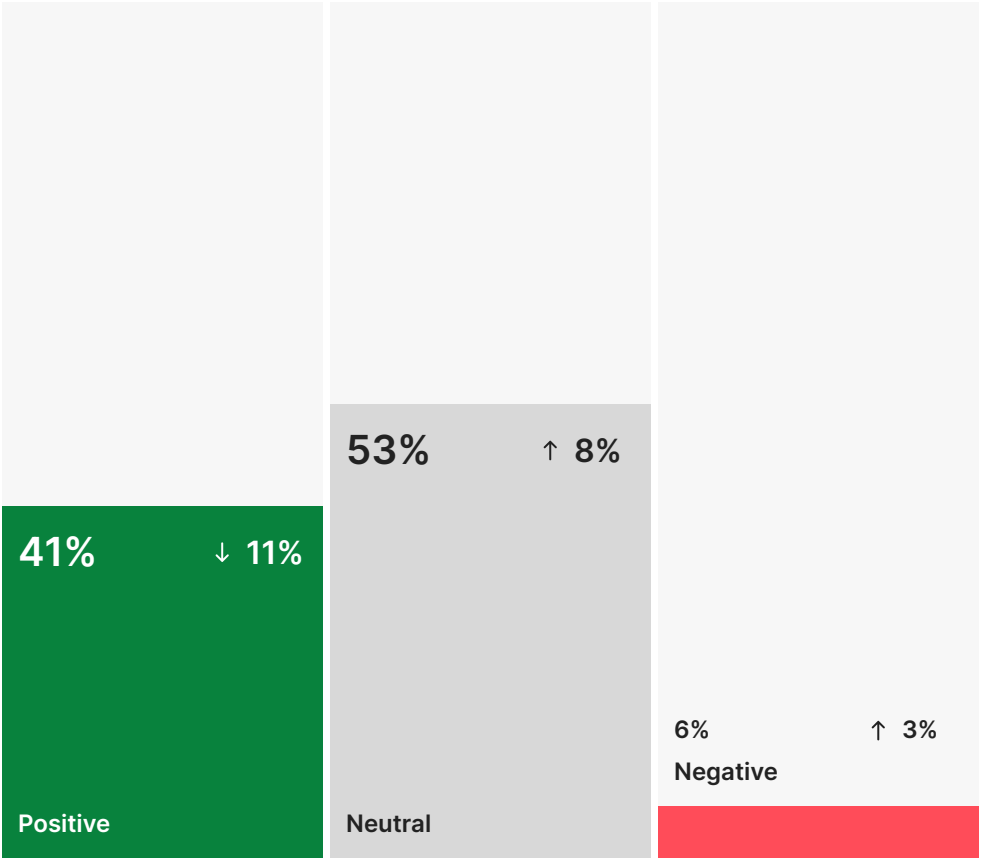

We take the average of these questions, then classify the score as positive (3+), neutral (1.5 to <3), or negative (≤ 1.5). The percentages represent the percent of respondents in each category.

If you have a previous cycle, the up (↑) and down (↓) arrows will show the change in percentage points.

41%

of 754 surveyed residents are
satisfied with life in Charles
County

↓ 11% vs. previous cycle

These are the main measures of satisfaction in your community

The bars on the right show the proportion of responses that are positive (4 or 5), neutral (3), or negative (1 or 2). The percentages show the percent in the positive category.

We take the average of the Community Characteristics, then classify the score as positive (3+), neutral (1.5 to <3), or negative (≤ 1.5). The percentages represent the percent of respondents in each category.

If you have a previous cycle, the up (↑) and down (↓) arrows will show the change in percentage points.

Demographic Breakdown

Smaller sample sizes can lead to unreliable estimates. For this reason, we hide scores for groups under 30 respondents.

For groups between 30 and 49 respondents, we highlight the small sample size using an asterisk (*). Use these scores with caution.

Community Benchmark

How we compare Charles County, MD to other similar communities

Residents from more than 1,000 communities across the United States have participated in Zencity's Community Surveys. We use the combined results from these surveys to produce our benchmark estimates. By averaging across respondents from dozens or hundreds of different communities, it's possible to arrive at a picture of what the results for a "typical" community in that cohort look like. This offers a way to compare your results- particularly strengths and areas for improvement- within a greater context. Each community running a Community Survey with Zencity receives a customized community benchmark cohort that reflects its unique characteristics.

First, the cities, towns, and counties in the United States are allocated into cohorts using variables such as population size, geography, density, and demographics to group similar communities together. Then, each cohort's benchmarks are calculated using the same scoring methodology outlined in the Survey Methodology section. Finally, since recruitment methods can differ slightly according to the needs of each community, cohort benchmarks are adjusted accordingly to match the exact distribution of recruitment methods.

These are some of the communities represented in your cohort

Density is calculated by people per square mile of land area.
Diversity is measured by percentage of people who are not in the largest race or ethnicity group.
Median income is the median annual dollars of income per household.

COMMUNITY NAME	TOTAL POP	DENSITY	DIVERSITY	MEDIAN INCOME (\$)
Charles County, Maryland	161,448	353	48.51%	\$103,678
Carroll County, Maryland	168,233	376	7.10%	\$99,569
