ESSENCE data for urgent care utilization at Patient First in Waldorf had no data warnings or alerts for Thursday, April 23rd. Patient volume was 20 patients. This is down from the previous day where they saw 45 patients. All were discharged to home for self-care. 8 presented with ILI or COVID-19 like symptoms on Thursday, 4/23. Diagnoses included influenza due to other identified influenza virus with other respiratory manifestation, acute maxillary sinusitis, allergic rhinitis, acute bronchitis, respiratory tuberculosis, acute frontal sinusitis, and shortness of breath. There was 1 case with 2 CDC Classifier tags for Coronavirus and ILI negative influenza and 1 case with a CDC Classifier for Influenza. New data will be pulled on Monday, April 27.

Surveillance of EMS call data and alerts

The epidemiologist monitors the Charles County DES First Watch trigger alerts. The number of daily trigger alerts for COVID-19 cases or COVID-19 persons under investigation was 17 on 4/22. Discussions with Robbie Jones from EMS reveal data issues with the alert system. The decrease in COVID-19 PUI alerts does not indicate a decrease in call volume. The epidemiologist has also noticed potential COVID-19 PUI that came as regular trigger alerts. Robbie said that they have to fix each tablet in order to fix the problem and have more accurate data. New data will be pulled on Monday, April 27.

Robbie also reports that there are currently 17 EMS personnel on quarantine. Several will be coming back to work next week. They are seeing a decline in the number of personnel who need to go on quarantine. New data will be pulled on Monday, April 27.

- 4/18: 18
- 4/19: 23
- 4/20: 19
- 4/21: 21
- 4/22: 17
- 4/23: 12

Racial breakdown: The data is now being captured in the MDH line lists of confirmed cases in REDCap. Data was accessed on 4/24 at 9:00 am. Please be cognizant that data may differ from numbers pulled later in the morning since new positive lab results are being received by the health department and entered into NEDSS throughout the work day. This explains any discrepancies in the total count or denominator being used to calculate each data measure.

Total: 459 cases on 4/24 at 900 am MDH line list assessed through REDCap:

Data on race and ethnicity changes daily as case investigations are completed and more information on demographics is updated in the electronic reporting disease system. Additionally, when there is an influx of new cases in electronic reporting disease system, data on race and ethnicity may not be available immediately for new cases since race information is not typically captured on a lab report and must be obtained during the investigation. New data will be pulled on Monday, April 27.

(Case counts with less than 7 cases should not be shared publicly. This data is confidential.)

Race Breakdown

- Asian: 10 (2.2%)

- Black/African American: 220 (47.9%)
- White: 116 (25.3%)
- Other or 2+ races: 19 (4.1%)
- Data not available or Declined to Answer: 94 (20.5%)

Racial breakdown among confirmed fatalities

- 57.6% Non-Hispanic White
- 39.4% Non-Hispanic Black
- 3% Hispanic

Ethnicity Breakdown

- Hispanic 11 (2.4%)
- Non-Hispanic 341 (74.3%)
- Declined to answer 37 (8.0%)
- Data not available 70 (15.3%)

Epidemiologist's note: *Please use caution when drawing any conclusions regarding race or ethnicity. There is still a percentage where race data is not available, and information regarding this missing population cannot be assumed. Additionally, it should be noted that the greatest number of cases (58%) are the Waldorf zip codes of 20601, 20602, and 20603. Over half of the county population lives in those zip codes. Additionally, those zip codes have a very diverse population with minority populations comprising the majority of the zip code level population and with African Americans being the largest racial group in those zip codes.*

Zip Code level data was also analyzed using the MDH line lists of confirmed cases in REDCap. Data was accessed on 4/23 at 10:00 am. New data will be pulled on Monday, April 27.

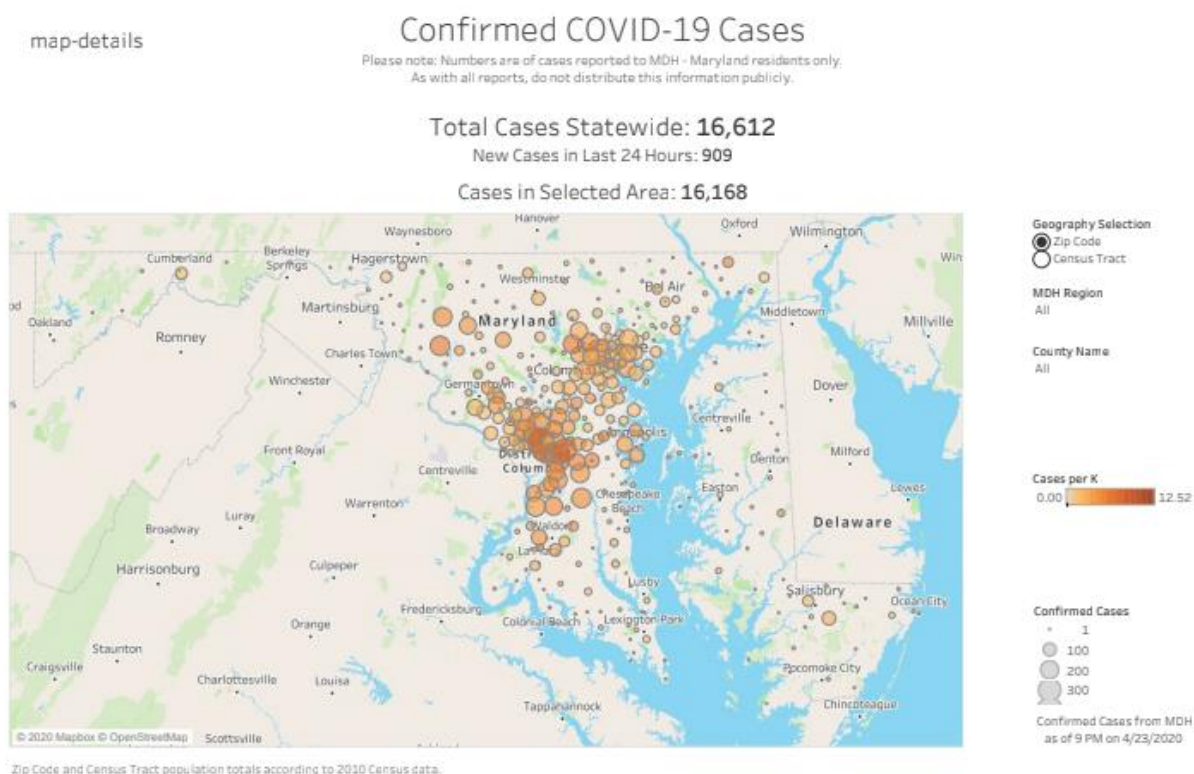

(Zip code level data with counts less than 7 cases cannot be shared publicly and must remain confidential.)

Hospital Volume Trend Lines

These volume data are derived from real-time Admission/Discharge/Transfer feeds sent to CRISP. The thickness of the line is a measure of volume. These volume counts are imprecise for reasons such as differences in how feeds are implemented among hospitals. However, the trendlines provide utility in understanding directional volume change over time.

The orange reference line shows the statewide average relative volume by the day of the week, using all ADT data from January 1, 2020 to February 29, 2020.

These volume counts are imprecise for reasons such as differences in how feeds are implemented among hospitals. However, the trendlines provide utility in understanding directional volume change over time.

The orange reference line shows the statewide average relative volume by the day of the week, using all ADT data from January 1, 2020 to February 29, 2020.
